

THE CB TYRE DEFLATION VALVE - STOWAGE

The CB Tyre deflation valve is normally supplied as one valve per vehicle tyre. Valves can be supplied loose or in stowage devices as follows:

The Leather Stowage Pouch

The Stowage Pouch is made from the best quality black leather and can be supplied to suit one or four valves.

The closing flap includes a clear plastic window which holds the valve operating instructions on a card.

Pouch Size	Part Number
1 slot	002-00055
4 Slot	002-00051

The Metal Stowage Box

The Metal Stowage Box is precision made from steel sheet painted in crackle finish paint. The valves are located in a nylon block. The lid closes onto the valve sprung plungers which avoids rattles. The box can be mounted horizontally or vertically. Keyhole screw slots are provided.

Typical locations are:

- Cab door inner panels
- Top or front of dashboard
- Rear of cab wall.

The stowage box is held closed by a magnetic strip. When the lid is opened the valves are pulled upwards and outwards to enable easy grip especially with gloved hands. Inside the lid a space is provided for a stick-on instruction sheet

The Stowage Clip

The Clip is a simple, but effective way of storing the deflation valves in a readily accessible way on the dashboard, bulkhead or transmission tunnel. The valves are held by their own spring force.

Part Number: 002-00180
