

# THE CB EXTREMEAIRE COMPRESSOR INSTALLATION KIT

For customers who prefer to make their own compressor installation, but still use the high-quality components used in the CB OEM products, an installation kit is now available. The kit includes all the parts (apart from electric cable) required to construct a pressure switch controlled demand air system. The kit allows the components to be located to suit the vehicle and comes with installation instructions and diagram with parts list.

The kit includes:

On/off switch

70A relay

Manifold

Pressure relief valve (11 Bar)

Pressure Switch 10 bar.

500mm high temperature flexible hose

Adapter fitting to suit above.

Crimped on insulated electrical terminals to suit.

Compressor mounting screws, nyloc nuts and washers (4)

Manifold mounting screws, Nyloc nuts and washers (2)

Tube of thread sealing compound.

All fittings are 1/4 BSP/NPT.

The picture shows the kit installed on a 12v Senior compressor with the current trip

(supplied with the compressor) and relay bolted to the manifold with the screws provided.

A remote on/off switch is provided which can be wired through the vehicle's ignition.
